

My Tutorial Proposal

Mountain Trails and Snowboard Examination

Luke Jecen CIS 3344

For my tutorial project I will give the user a variety of radio buttons that are apart of a radio group that the user can select between. The text displayed next to theses radio button sand the name of these radio buttons will be determined by the objects that will appear when the button is selected property title. When said button is clicked, the object, most likely large images of mountains with snowboarding trails and snowboards which will be a rich DOM element will appear under each radio button which will all be displayed horizontally. Included will be event handling such as Image zoom so the user can examine the snowboarding trails of a mountain more closely and can get a much closer look at the fine details of a snowboard. It will also include event handling for when you click on the said radio button details about the image will appear below it is including the name, the price of what the image you are looking at, and an in-depth description about the item or trail the user is seeing an image of.

Radio buttons-
